

Supermicro X13 COTS Edge Server with Intel® vRAN Boost

NEW: Expanding Supermicro's portfolio of purpose-built servers for Edge AI and Telco workloads is the latest X13 Edge server—the [SYS-211E-FRN13P](#)—a scalable, integrated cell site Commercial Off The Shelf (COTS) server optimized for Open RAN and 5G environments.

Launching alongside is a 4-node version of the SuperEdge, a versatile Edge server designed to handle a range of demanding workloads at remote network locations, as well as 3 new compact edge systems suited for small and medium businesses. Each of these new systems for Edge workloads include support for GPU accelerators, as well as AI inferencing. Learn more about these flexible systems by reading the full press release.
