

Supermicro Newsletter June 2024

Supermicro Unveils New X14 AI, Rackmount, Multi-Node, and Edge Server Families Optimized for Intel® Xeon® 6 Processors with E-cores

At this year's COMPUTEX, Supermicro is thrilled to announce the launch of our X14 server portfolio, optimized for the latest Intel® Xeon® 6700-series Processors with Efficient-cores (E-core).

Designed for maximum performance-per-watt, E-cores feature a single thread per core, and are optimized for workloads that benefit from significantly more energy-efficient cores to run more simultaneous instances at once, using less power.

Additionally, Supermicro has also announced future support of Intel Xeon 6900-series processors with P-cores, which will be optimal for increased performance-per-core workloads!

Read the full announcement here for more on the new Supermicro X14 servers launching today with Intel Xeon 6700 series processors with E-cores, or dive right in by testing out Supermicro's X14 servers remotely through our JumpStart program!
