

Seamless Oversight, Smart Management

IEI Remote Management Empowers Remote Control

In response of IIoT service availability management, IEI's iRM solution offers the ultimate solution —centralized control, real-time visibility, simplified operations, and optimal performance, creating a sustainable digital ecosystem.

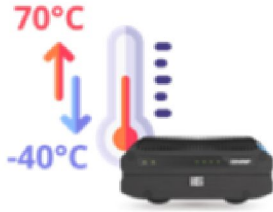

[Learn More](#)

Remote Management Software, Designed for Optimized Efficiency

Utilizing a user-friendly online platform, iRM software allows users to manage multiple industrial devices from a single, intuitive dashboard efficiently. Users can remotely monitor health status of edge devices' OS, configure email alerts by selecting specific metrics tailored to their needs, and carry out diagnostics, preventing costly downtime.

Industrial-Grade Mini Server, where Reliability Meets Performance

Enhanced Reliability

The iRM solution includes an industrial-grade mini server designed to withstand extreme temperature, ranging from -40°C to 70°C.

Secure All-in-one Platform

The mini server comes fully equipped with a pre-installed iRM software and an embedded OS featuring an integrated malware remover and one-click OS reset.

Cross-device Capabilities for Seamless Integration

The iRM solution is fully compatible with all x86 devices, supporting both Linux and Windows operating systems on managed devices. This ensures effortless integration into your current infrastructure, regardless of your hardware setup.
