## Channel news | May 2023

- New products
- ProDVX Android roadmap
- Features
- Stock clearance – first come, first served!
- Products that go from stock to build to order
- EOL products

### **New products**

POGO RGB LED Bar is a new accessory to complement our existing range of Panel PCs. This innovative device allows you to effectively signal meeting room availability or payment status in a sleek and stylish way. The Pogo Pin LED Bar is incredibly easy to install and can be attached to ProDVX Panel PC in a matter of seconds, thanks to its unique pogo pin design. Simply align the pins with the appropriate connectors on your Panel PC, and you're ready to go. You can find details about this product on ProDVX website, under the following [link](#).

Please get in touch with your account manager if you have any questions.

### **ProDVX Android roadmap**

As an Android specialist, ProDVX is always on the lookout to make a difference for our partners and customers. It's our vision that we always offer the most stable and most secure devices.

This vision is also reflected in our Android roadmap. Specifically, this means that ProDVX is now making the transition from Android 9 to Android 11. The new APPC-10SLBe is the most recent example of this.

Android 11 is a non-rooted version, whereas Android 9 was rooted. This difference can have implications for the development of applications for our devices. It also has implications for the management of our devices. Devices with Android 11 cannot be reverted back to Android 9, therefore, it is important for partners to be aware of this development.

Please contact your account manager or [sales@prodvx.com](mailto:sales@prodvx.com).

### **Features**

We have further improved functionality and security on all our Android-based devices. With the implementation of the Chromium browser, ProDVX takes a next

step in compatibility and security of our products.

In addition, we have added another important device security option. You can now either enable or disable ADB debugging with full control. You can choose to do this locally over USB, or do it remotely over TCP.

ProDVX has also introduced the possibility to make your application start on boot of the device automatically, without the requirement of changing anything inside the code of the application.

New firmware versions will become available shortly for the majority of the ProDVX APPC and ABPC series. Please check our [support portal](#) for the availability for your device.

ProDVX devices are designed and manufactured to service professional solutions. These solutions have often become crucial to the day to day operations of businesses. Therefore, they require digital signage hardware that has a long lifespan, so that important processes can continue uninterrupted. Our devices are designed with this principle of a long, reliable product lifespan.

At present, most of our Android Panel PCs come with Android 9 as their standard operating system. This version of the operating system is the final version that still supports the legacy device admin feature. From Android 10 onwards, this feature is no longer supported.

This can present a significant change for software development. For this reason, many in the Android development community still hold on to Android 9, making it the most widely used version for professional solutions.

Although the official Google Android Security Patch is no longer available, security updates are still being developed for Android 9. Due to the maturity of the platform, most of these updates don't have a high impact, which makes Android 9 one of the most stable Android versions there is.

However, we are always looking at future innovations. Recently, we launched the APPC-10SLBe, our first device which runs on Android 11. This device runs on the GMS version of Android 11. Next to this GMS variant of Android, we are developing devices with the open-source version of this Android variant. Android 11 provides a future proof platform which combines new functionalities with a high level of security and stability. These new products are expected later this year.

Regarding our ProDVX IPPC-range, our Intel Panel PCs are migrating to newer versions of Windows IoT. The currently supported versions are Windows IoT Ent 2016 LTSC and 2019 LTSC (on selected models). Development has started for the support of version 2021 LTSC.

**Stock clearance – first come, first served!**

As the second quarter of 2023 just started, discounted products may help you to secure projects that have tight budgets. We have a variety of clearance stock ready to be dispatched. These products are available with the special price.

Please get in touch with your account manager for any questions and quotations.

### **Products that go from stock to build to order**

The following products change from stock to build to order items:

- APPC-10DSKP
- APPC-10DSKPL

### **EOL products**

The following products are EOL:

- APPC-22X
- APPC-32EL
- APPC-10SLBW - replaced by APPC-10SLBNW

## **News | May 2023**

- Product spotlight: ABPC-4200 and ABPC-4220
- New 2023 e-catalogues
- Marketing company news
- Software partner program development
- Bank holidays

### **Product spotlight: ABPC-4200 and ABPC-4220**

In this month's spotlight are the ABPC-4200 and ABPC-4220. The ProDVX Android Box PCs serve as high-quality digital signage players, catering to the seamless deployment of content to displays and monitors. Running on Android 9, these versatile Box PCs find applications in digital signage, wayfinding, and more.

Check out full technical specifications of APPC-4200 [here](#).

Check out full technical specifications of APPC-4220 [here](#).

Discover the Box PCs, visit ProDVX dedicated page [here](#).

### **New 2023 e-catalogues available**

We would like to let you know that our two catalogues edition 2023 are available

online.

ProDVX Product Catalogue 2023 is available [here](#).

ProDVX Solution Guide 2023 is available [here](#).

Please let us know if you would like a printed version of our catalogue. We will be happy to oblige.

### **Marketing company news**

Have you seen our new company video?

Check it out for an exclusive insight into what we do and how we work [here](#)!

ProDVX has recently published a new blog by YAROOMS, ProDVX software partner: [7 Essential Elements of Smart Offices](#).

You can find this out in this guest blog, written by ProDVX software partner YAROOMS. YAROOMS specializes in smart office solutions, that run on ProDVX Panel PCs, and is able to perfectly update you about this topic.

ProDVX regularly publishes stories, blogs, new product information, and updates about the company developments on ProDVX Europe LinkedIn page. Please feel free to follow us. The link to the LinkedIn page is [here](#). #ProDVX #ProDVXisalways on

Do you have a great case-study where you used ProDVX products to develop the solution? Get in touch with our marketing team at [marketing@prodvx.com](mailto:marketing@prodvx.com).

### **Software partner program development**

We are proud to inform you that the list of official ProDVX software partners is growing. Check the newcomers at the following [link](#).

If you are interested in co-operating with any of our software partners, please let us know. We will be glad to officially introduce you to them.

### **Bank holidays**

We would like to inform you that there will be many bank holidays in the coming months. The ProDVX office and our warehouse will be closed during those days. Below, you can find an overview of those days. Please let us know if you would like more details about shipments and order placements during and before bank holidays. Send all your questions to [sales@prodvx.com](mailto:sales@prodvx.com).

## Blog

### **Blog | by Timon (Sales department)**

Last week I attended the FireSafety and Security event at de Brabanthallen, 's-Hertogenbosch. It was great to see some of our products being used for unique solutions at the booths of our distributor Copaco and security partner ARAS. Alongside this event and some partner visits it was nice to have our external colleagues Emilie and Sebastian in the office as well. After some internal trainings, quarter reviews and intense meetings we took the opportunity to go out for food and drinks in the beautiful city centre of 's-Hertogenbosch.

In case you are also exhibiting at an event in the next few weeks, please let me know so I can stop by for a chat.
